

## Requirements

- PHP Server V5.0
- Browser JavaScript Enabled

## What is Print-Designer?

This is an online solution for Selling Print Products with customized Motives and Texts. This already includes Templates for Business Cards, Stamps and Flyers and any new Template can be added.

## Print-Designer Highlights:

- Design for OneSide & TwoSides Business Cards
- Design for Stamps in Circle & Square form
- Unlimited Normal & Curve Text on each Design-Side
- Add Unlimited motives on each Design-Side [Support SVG Format]
- Upload unlimited motives on each Design-Side [Support SVG Format]
- Convert Text to QR-Code on Designs
- Using Google Fonts as Custome List via XML or Complete via jQuery fontselect
- Save and Load the Design with a Design-Code without using a Database
- Print the Design
- Share the Design on Facebook

## Good to Know:

- After saving your Design, you will receive an Email including your DesignCode, next time you can load Your Design including all detailed properties like Prices, Backgrounds, etc.. and continue working on it until final version, then you can order this, Print-Designer be able to save your name, email and Address and loading this on next time for your convenience.

## Main Installation & Settings:

Rename Application folder after unzip from **main** to **Print-Designer**

**Notice:** JS folder files are all Obfuscated, normal files for changes/edit will be found in:  
**NOT\_FOR\_UPLOAD/LOCAL\_JS/**

Open **NOT\_FOR\_UPLOAD/LOCAL\_JS/initApp.js[Line 35]**:

```
window.appURL = "http://www.yourdomain.com/Print-Designer/"; // set your Domain name
window.textPrice = "3.00"; // Price for each Text will be add to Design
window.motivePrice = "5.00"; // Price for each Motive or Upload Images on Designs
window.backgroundImagePrice = "8.00"; // Price for BusinessCard Background Image
window.backgroundColorPrice = "2.00"; // Price for BusinessCard Background Color
window.fbackgroundImagePrice = "10.00"; // Price for Flyer Background Image
window.fbackgroundColorPrice = "5.00"; // Price for Flyer Background Color
window.currencySign="$"; // Currency Sign that will use Overall
```

## Preparing „js/initApp.js“ before Upload:

Please use Javascript Obfuscator from <http://javascriptobfuscator.com> to do this, open **NOT\_FOR\_UPLOAD/LOCAL\_JS/initApp.js** with editor, copy All and paste it into above file and then replace **js/initApp.js** source with **Obfuscated result**.

Open [settings.php](#):

```
$domain = "http://www.yourdomain.com/Print-Designer/orders/"; // Enter your Domain name
$contact_path = "http://www.yourdomain.com/ Print -Designer/images/contact/"; // for Email
Template
$email_to = "youremail@yourdomain.com"; // Admin Email
$userEmailSubject = "Print-Designer | User Confirmation Email"; // Email Subject
$adminEmailSubject = "Print-Designer | Admin Confirmation Email"; // Email Subject
$PaypalEmail = "youremail@yourdomain.com"; // Paypal Email, this will be use in confirmation email
$PaypalShipment = "10"; // Your Paypal Shipment Price
$PaypalCurrency = "USD"; // Your Paypal Currency
$PaypalLanguage = "US"; // Your Paypal Language
$BankInfos = "xxx xxx xxx xxxx"; // Bank Infos, this will be use in confirmation email
```

Open [share.php](#) and [order.php](#):

Facebook Share Page info settings:

```
<meta property="og:title" content="Hi there ..."/>
<meta property="og:description" content="This is my new Design by Print-Designer!"/>
```

Now you can upload Print-Designer[All files and Folders except NOT\_FOR\_UPLOAD folder] under your domain and call Print-Designer as:

[www.yourdomain.com/Print-Designer](http://www.yourdomain.com/Print-Designer)

**Note: If you want to rename „Print-Designer“ folder, you should also rename all above settings.**

### How add my Products?

Adding products is easy and can be done in xml/products.xml, this support unlimited Products.

#### *Add a Horizontal Business Card with One Side:*

```
id="20140610"
name="Business Card OneSides"
price="20.00"
productFormat="H" // This should not change or rename
category="BusinessCard" // This should not change or rename
thumbImage = "images/products/cards/H_Card_oneside_thumb.png"
frontImage = "images/products/cards/H_Card.png"/>
```

#### *Add a Vertical Business Card with Two Sides:*

```
id="20140610"
name="Business Card OneSides"
price="40.00"
productFormat="V" // This should not change or rename
category="BusinessCard" // This should not change or rename
thumbImage = "images/products/cards/V_Card_twoside_thumb.png"
frontImage = "images/products/cards/V_Card.png"
backImage = "images/products/cards/V_Card.png"/>
```

### Add a Stamp in Square Form:

```
id="20140414"  
name="Stamp Square"  
price="30.00"  
category="Stamp" // This should not change or rename  
productFormat="square" // This should not change or rename  
thumbImage = "images/products/stamps/stampSquare_thumb.png"  
frontImage = "images/products/stamps/stampSquare.png"/>
```

### Add a Stamp in Circle Form:

```
id="20140415"  
name="Stamp Circle"  
price="40.00"  
category="Stamp" // This should not change or rename  
productFormat="circle" // This should not change or rename  
thumbImage = "images/products/stamps/stampCircle_thumb.png"  
frontImage = "images/products/stamps/stampCircle.png"/>
```

### Add a Flyer:

```
id="20140416"  
name="Flyer 1748x2480"  
price="80.00"  
category="Flyer" // This should not change or rename  
productFormat="none" // This should not change or rename  
thumbImage = "images/products/flyers/flyer_thumb.png"  
frontImage = "images/products/flyers/A5_Flyer.png"/>
```

### How add my Motives?

For this just drop your Motives inside images/motives, xml file will update Automatic.  
Motives can be in PNG or SVG formats.

### How add my Special Google Fonts?

You can add unlimited fonts in xml/fonts.xml as:

#### Sample1:

```
<font  
family="Jolly Lodger', cursive"  
name="Jolly+Lodger"  
label="Jolly Lodger"/>
```

#### Sample2:

```
<font  
family="Kranky', cursive"  
name="Kranky"  
label="Kranky"/>
```

### How can i load all GoogleFonts with Preview?

Open initApp.js\* and on top set **window.googleFontsCustom = false;**

- Please edit it in **NOT\_FOR\_UPLOAD** folder and after **Obfuscating**, replace it in **js** folder.

### Print-Designer Save/Order Options:

Here we need a valid Email from user to send the **DesignCode** , with this Code, user be able to load and Edit the Design again before Order.

After preparing Final Design, user can Order it and recieve final confirmation email with Payment informations.

### Print-Designer Print Option:

Here user can Print Active-Design-Side, **[user should firts save the Design]**

### Print-Designer Share Option:

Here user can Share Active-Design-Side, **[user should firts save the Design]**

### Print-Designer CurveText Options:

User can simply change a **NormalText** to a **CurveText** and change **Curve Direction & Spacing**.

### PSD Sources:

For Logo and all Icons, there are PSDs under:

**NOT\_FOR\_UPLOAD/PSD/**

### How customize Print-Designer Texts/Labels/Colors/EmailTexts:

- Statistic Texts and Labels will be found in index.html
- Element Colors can be change in css/style.css
- EmailTexts comes from **order.php**, **saveFiles/saveBothSideInfos.php** and **saveFiles/saveFrontInfos.php**
- Dynamic Labels will be found in initApp.js\* and designer.js\*

\* Please edit them in **NOT\_FOR\_UPLOAD** folder and after **Obfuscating**, replace them in **js** folder.
